HISTORY

Fussey Piling Limited can boast a heritage of over 40 years experience in the construction industry. Fussey Piling Ltd has the most modern piling plant available, which includes all the latest developments in piling technology.

We offer our customers a unique and powerful combination of specialist skills with experience and management, which gives a total service unmatched by any of our competitors.

SERVICES OFFERED

We offer a full design, supply and drive (and extract if necessary) service and are pleased to submit quotations at the design, tender or contract stage.

If required, we can advise on all installation techniques to assist you in selecting the most appropriate method of installing piles on your scheme.

We can also offer large stocks of used 'U' Section piles, which facilitates short lead-in times to meet your programme requirements.

EQUIPMENT

We are able to offer the broadest range of specialist sheet piling techniques currently available, within rigorous Health, Safety, Environmental, and Quality Assurance management systems.

WP150 Kowan Stillworker: These can press piles without any significant noise or vibration.

ZU100 Kowan StillWorker: Similar to the above but can silently install Z type piles, which can better meet Eurocode 3 part 5.

Bauer RT6 Leader Rigs: Our 16m telescopic leader rigs have 100tonne Variable Moment Vibrators making them amongst the most powerful in this country.

PVE 2316 Variable Moment High Frequency Vibrators: This is "state of the art" vibrator technology, which reduces the excessive ground borne vibrations caused at start up.

HPH 2400 2tonne & HPH1200 1tonne Hydraulic Drop Hammers: These can deal with the hardest driving without the excessive noise and pollution of conventional equipment.

HEAD OFFICE

HEALTH & SAFETY

All our operatives hold valid *CPCS* and or *CSCS* cards relevant to the task they are required to do on site. In addition to this all our supervisors have NVQ Level 3 training and certification as well as *CSCS Gold Site Supervisors* card and *Site Supervisors Safety Training Scheme (SSSTS)* training and certification.

All site managers hold *CITB Site Manager Safety Training Scheme (SMSTS)* certification.

We constantly strive to ensure that our workforce are the **best** trained and this has been recognized by our *CSCS Platinum Certificate* - awarded for 100% certified workforce. All our operatives are continuously updating training and hold NVQ awards to levels 2 & 3 in the disciplines they specialize in.

Fussey Piling will identify hazards by careful risk assessment during the design and planning process, when the work is being carried out on site, and to ensure that the proper controls are in place to ensure that identified risks are correctly managed.

ENVIRONMENT

Fussey Piling will endeavor to offer protection to the environment at all times. Prevention of pollution to earth, water and atmosphere is considered to be of paramount importance. Industrial pollution can consist of associated products, noise etc.

It is the policy of fussey piling to address all forms of pollution and produce site specific procedures relative to:

- ✓ Emissions into the air.
- ✓ Control of spillages.
- ✓ Disposal of Special Wastes.
- ✓ Control of Noise.
- ✓ Cleanliness, general housekeeping and site tidiness.

QUALITY

Fussey Piling is committed to achieving consistently high standards of service to our Customers. We firmly believe that the utilisation of best practice techniques will assure that the required standard of quality will be maintained and improved upon through a process of total continuous improvement.
